Software Engineer with experience in designing, building and testing applications with some of the up to date technologies. Specializing in frontend development some of the key technologies I have worked with include:

- **Languages:** JavaScript, Python, Typescript,SQL
- **Database systems:** MYSQL, Firebase
- **Frameworks & Libraries:** React JS, NextJs, Flask, JQuery
- **Version Control:** Git, GitHub, Gitlab
- **Others:** Html, CSS, Sass, Chakra Ui, Material Ui, Bootstrap,

EXPERIENCE

FEBRUARY 2022 – PRESENT

FRONTEND ENGINEER, SAVANNAH INFORMATICS LTD

- Contribute in building a scalable and reusable codebase to allow for future maintainability of the repository.
- Perform unit and end-to-end tests to have robust and improved application security.
- Provide fixes and improve production software to fit clients' needs.
- Collaborate with team members to improve efficiency and best practices.
- Document project details to allow for easy collaboration and contribution.

APRIL 2019 – JANUARY 2022

UNDERWRITING EXECUTIVE, RESOLUTION INSURANCE LTD

- Capture member claims into the system for payment approval by the finance department.
- Onboarding of members into the company's core system based on their category i.e. Corporates, SME, Individual groups and reconciled rates based on information provided by the actuarial/pricing department.

EDUCATION

JUNE 2021

CERTIFICATE, CODECADEMY

- Certification for different technologies including JavaScript, React Js, JQuery, HTML5 and CSS.

DECEMBER 2018

DIPLOMA IN BUSINESS INFORMATION TECHNOLOGY, ZETECH UNIVERSITY

PROJECTS

- THE GOOD APP.

[Live Demo](#) [Git Repository](#)

A web application built in react js for an agency. The application makes http requests to APIs i.e Youtube for videos and flutterwave to handle payments. Application state is managed using the context api and reducers to update the state. Styling is done in sass and the CI/CD pipeline is set up to track a GitHub branch and when updates are pushed to it, the deployed version is updated. The application is hosted by netlify.

- IMPALA RUGBY.

[Live Demo](#) [Git Repository](#)

This is a team web application with a panel that allows for player management and team reports for internal use. The application frontend is built in Next js and Typescript, material ui for the styling and the backend which is still in development is built in python, Django & Django Rest Framework. The frontend is hosted by netlify.
